Additional Information

- Some attribute names are simplified/shortened a bit to fit in the page
  (e.g., you will need to rename Quiz.#attempts for the relational schema; PostgreSQL will probably no allow "#")

- Interpretation of some (maybe less clear) attributes

`Question.type`	Indicates of question is MCQ or MRQ
`Question.status`	Indicates if public or private
`Question.statement`	Just the question itself; having a column with the same name as the table is not great
`Quiz.status`	Indicates if public or private
`Quiz.#attempts`	Maximum number of attempts
`Quiz.published`	Indicates if the quiz is published or not (i.e., this attribute is not a date)
`Answer.correct`	Indicates if the answer is correct or not (we only have MCQ/MRQ)
`contains.mandatory`	Indicates if a question in a quiz is mandatory or optional
